ART UNIT 2871		PAPER NUMBER		
MAIL DATE 06/16/2008		DELIVERY MODE PAPER		

**Please find below and/or attached an Office communication concerning this application or proceeding.**

The time period for reply, if any, is set in the attached communication.

### Office Action Summary

**Application No.**

09/541,426

**Applicant(s)**

KYEONG KIM

**Examiner**

Dung Nguyen

**Art Unit**

2871

**Period for Reply** -- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 03 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
  - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
  - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
  - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 26 February 2008.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1, 3, 20-25, 28 and 57 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1, 3, 20-25, 28 and 57 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

**Attachment(s)**

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-84C)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)  
Paper No(s)/Mail Date \_\_\_\_\_
- 4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date \_\_\_\_\_
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: \_\_\_\_\_

### DETAILED ACTION

Applicants' amendment dated 02/26/2008 has been received and entered. By the amendment, claims 1, 3, 20-25, 28 and 57 are now pending in the application.

#### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1, 3, 20-22, 24 and 57 are rejected under 35 U.S.C. 103(a) as being unpatentable over Koma, US 5,608,556, in view of Takeda et al., US 5,574,582, Nakamura, US 5,798,056 and Applicant's submitted prior art, Koma et al., figure 5, "No-Rub Multi-Domain TFT Using Surrounding-Electrode Method", SID, 1995, pages 869-872.

Regarding the above claims, Koma discloses a multi-domain LCD device (figures 3, 8 and 10) comprising:

a first substrates (10) and a second substrate (30) facing each other;

a homeotropic liquid crystal layer (41), wherein an alignment direction of the liquid crystal layer in one region is different from that of the other regions during an operation of the pixel (see figure 10);

a plurality of gate bus lines (12), a plurality of data bus lines (20), a plurality of TFTs (15) including a gate insulator (13), a passivation layer (21), and a pixel electrode (17);

an electric field inducing window (control window 33b) in the pixel electrode, so as the pixel electrode is divided into at least two regions (e.g. four regions/domains in figure 10);

a polyimide alignment layer (23) having a pretilt angle substantially  $1^\circ$  (respect to normal line);

Koma, however, neither disclose a storage electrode connected to the pixel electrode and overlapped with the gate line to form a storage capacitor. Takeda et al. do disclose a storage capacitor (12) can be formed with a capacitor electrode that overlapped with a gate line (5Xi-1) and connected to a pixel electrode (3C(i,j)) via a contact hole (see figure 2a). Therefore, it would have been obvious to one skilled in the art at the time of the invention was made to employ a storage capacitor as shown by Takeda et al. in the Koma's display device, sine it is a common practice in the art to improve a display aperture and to improve a signal voltage holding (see col. 1, ln 35).

Koma nor disclose the "L-shaped" TFT in the LCD device, it would have been obvious to one skill in the art to form a TFT having a "L-shaped" as evidence from the Applicant's submitted prior art, Koma et al. figure 5 since it is well known in the art in order to increase an aperture ratio of an LCD device.

In addition, although Koma does not disclose a PSCN or CeICN photo alignment, Koma does disclose that a photo alignment layer (e.g., polyimide) can be used (col. 6, ln 10). Nakakuma also discloses a polysiloxane compound is a well-know based compound for the photo alignment. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention was made to provide the polysiloxane compound (e.g., PSCN) based photo alignment film for a photo-aligning treatment (such as exposing the alignment film to UV light)

in order to avoid electrostatic discharge caused by rubbing process. Furthermore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to use an alignment material selected from the group of polyimide or PSCN and CelCn based compound, since it has been held to be within the general skill of a worker in the art to select a known material on the basis of its suitability for the intended use as a matter of obvious design choice.

*In re Leshin, 125 USPQ 416.*

It should be noted that, regarding claims 8-10 and 36-38, the limitation of the gate insulating and/or the passivation layer and/or the pixel electrode are/is patterned recites a one-step process which does not further limit the structure of the claimed LCD device. Therefore, the process limitation does not have patentable weight.

3. Claims 23 and 25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Koma, US 5,608,556, in view of Takeda et al., US 5,574,582, Nakamura, US 5,798,056 and Applicant's submitted prior art, Koma et al., figure 5, "No-Rub Multi-Domain TFT Using Surrounding-Electrode Method", SID, 1995, pages 869-872, further in view of Bos et al., US Patent No. 6,141,074.

Regarding the above claims, the modification to Koma discloses the claimed invention as described above except for the liquid crystal layer which has a positive or negative dielectric anisotropy and chiral dopants. Bos et al. do disclose a multi-domain LCD which can be formed with a positive or negative dielectric anisotropy liquid crystal layer (see Summary of the Invention). Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention was made to form a liquid crystal layer having a positive dielectric anisotropy or negative dielectric anisotropy because the use of one conventional material over another merely

depends on the desire of the manufacturer (i.e., homogeneous or homeotropic alignment) and/or the availability and practicality of the material for the chosen manufacturing process (see Summary of the Invention).

4. Claims 27-28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Koma, US 5,608,556, in view of Takeda et al., US 5,574,582, Nakamura, US 5,798,056 and Applicant's submitted prior art, Koma et al., figure 5, "No-Rub Multi-Domain TFT Using Surrounding-Electrode Method", SID, 1995, pages 869-8726, further in view of Sugiyama et al., US Patent 5,757,455.

Regarding claims 27-28, the modification to Koma does not disclose a negative uniaxial film or a negative biaxial film disposed on at least one substrate. Sugiyama et al. disclose a compensation film (e.g., a negative uniaxial film 49) can be formed over at least one substrate of an LCD panel (41) (see figure 10). Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to form a negative uniaxial film on at least one substrate of an LCD device because it is a common practice in the art to improve contrast and/or reduce inversion, often in the same viewing areas in an LCD device (see col. 11, lines 30-41).

#### ***Response to Arguments***

5. Applicant's arguments filed 02/26/2008 have been fully considered but they are not persuasive.

Applicants' argument is that none of the cited references teaches or suggests at least the feature of claim 1 of the claimed invention. The Examiner respectfully disagrees with Applicant's viewpoint. The Examiner agrees that each of the cited reference does not disclose

all the feature(s) of claim 1; however, as stated above, the combination of the cited references will teach all features as claimed as well.

Accordingly, the rejection of claims 1 and all dependent claims stand.

### ***Conclusion***

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dung Nguyen whose telephone number is 571-272-2297. The examiner can normally be reached on Monday-Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Nelms can be reached on 571-272-1787. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
